Professional Summary

Computer Science undergraduate specializing in AI & ML with strong algorithmic problem-solving skills and hands-on experience building reliable applications using Java, Spring Boot, and Python. Actively leverages AI-assisted engineering tools to accelerate development while prioritizing code quality, security, testing, and edge cases.

EDUCATION

B.Tech - Computer Science and Engineering (AIML) - CGPA - 8.9 **Greater Noida**
Noida Institute of Engineering and Technology. *2023 – 2027*

Competitive Programming & DSA

LeetCode: Contest Rating **1765** (Top 10% globally) | **30+** Live Contests | **800+** Problems
Codeforces: Maximum rating **1491(specialist)** – consistent performance in algorithm-intensive contests
IICPC CodeFest 2026: Ranked **3545** out of **13,000+** participants in the Global Prelims Round
Volume: Solved **1000+** problems DSA problems covering Trees, Graphs, Dynamic Programming, and Greedy algorithms.

Professional Summary

Infosys Springboard Internship **3-Month**
Role - Full Stack Developer Intern *Project Link*

- Engineered **InsurAI**, a full-stack digital insurance platform that automated paper-based workflows into a streamlined end-to-end portal for customers and administrators.
- Developed core backend REST APIs utilizing **Java, Spring Boot, and MySQL** to manage policy discovery, user applications, and real-time status tracking.
- Integrated an **AI-powered customer support chatbot** to resolve policy queries instantly, assist with application steps, and minimize repetitive support tickets.
- Secured **50+ API endpoints** using **JWT authentication** and **Role-Based Access Control (RBAC)**, validated via Postman tests within 2-week Agile sprint cycles.

Projects

Secure Bank Management & Payment Processing System 🛡️ | Java, Spring Boot, PostgreSQL, REST APIs

- Architected a headless payment orchestration API, decoupling Machine-to-Machine (M2M) integration via secure API keys from internal JWT role-based access.
- Engineered an idempotency layer with composite database constraints and a DAG-based state machine, preventing duplicate transaction charges during network timeouts and repeated requests.
- Resolved Hibernate N+1 query bottlenecks using **JOIN FETCH** and optimized database access, improving account-history retrieval performance under high data volume.

Document Q&A Engine 🗋️ | Python, FastAPI, LangChain, ChromaDB, Groq, Streamlit

- Built a **full-stack RAG system** enabling users to upload PDFs and receive contextual AI summaries and answers, reducing manual document review effort.
- Engineered a retrieval pipeline using **LangChain** for chunking, **HuggingFace** for embeddings, and **ChromaDB** for vector search, paired with **Groq's Llama 3.3** for generation.
- Developed a **FastAPI** backend with persistent conversational history via **SQLAlchemy**, supporting multi-turn conversations across independent user sessions.

Technical Skills

Languages: Java, Python, C, SQL
Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, System Design
Backend & Databases: Spring Boot, REST APIs, JWT, MySQL, PostgreSQL, MongoDB
AI & Engineering Tools: Cursor, GitHub Copilot, Prompt Engineering, LangChain, RAG
Cloud & DevOps: Docker, AWS EC2, S3 (Foundational)
Tools: Git, GitHub, Postman, AI-Assisted Coding Tools
